

Embedded AI Architect | Robotics & IoT Developer | Machine Learning Enthusiast

Passionate about project-based learning. Keen to collaborate with cross-disciplinary teams to develop real-world solutions, bridging theory and practice to make impactful contributions in smart systems.

EDUCATION

|                                                           |             |                 |               |
|-----------------------------------------------------------|-------------|-----------------|---------------|
| <b>B.Tech, Electronics and Computer Engineering</b>       | 2022 - 2026 | <b>XII 2022</b> | <b>X 2020</b> |
| LBS Institute Of Technology For Women, Thiruvananthapuram |             |                 |               |
| CGPA: 8.17/10                                             |             | 92.75%          | 98%           |

SKILL SUMMARY

**TECHNICAL SKILLS :** • Embedded System • TinyML • Deep Learning • Agentic AI • Python • C • C++ • Computer Vision

**FAMILIAR TOOLS:** • Arduino IDE • Edge Impulse Studio • Canva • Relay • OpenCV • YOLO

**SOFT SKILLS:** • Teamwork • Creative thinking • Leadership • Adaptability & Resilience • Project Management

**LANGUAGES :** • English • Malayalam • Tamil • Hindi

INDUSTRIAL TRAINING EXPERIENCE

**TinyML Intern**  
*Centre for Development of Advanced Computing (CDAC), Thiruvananthapuram*

June 2025

- Enhanced skills in the ML domain. Understood and worked with the concepts of Tiny ML, Edge Impulse, hardware integration, and edge computing.

**Robotics Developer Intern**  
*AJU Ed Solutions, Thiruvananthapuram*

Dec 2025 - June 2026

- Build hands-on expertise in hardware-software integration, specifically mastering real-time sensor fusion, motor control, and embedded programming, and ultimately sharpening systemic troubleshooting skills.

PROJECTS

**Illegal Forest Logging and Trespassing Detection using Tiny ML - Internship Project at CDAC**

Jun 2025

- A battery-powered edge-node system harnessing TinyML technology for detecting unauthorized forest activities and sending real-time LoRa alerts to a central dashboard for forest protection.

**Fish Spoilage Detector - College Mini Project**

Jan 2024 - Mar 2025

- Sophisticated IoT-based system designed to revolutionize food safety by monitoring fish freshness in real time. The device functions by detecting Ammonia levels, and provides immediate feedback.
- Won 2nd for the Best Mini Project of the Department Award

**Automatic AI Based Bird Deterrent - College Main Project**

Dec 2025 - Mar 2026

- A high-level autonomous system to mitigate bird strikes in aviation and crop damage in agriculture using AI. It is an eco-conscious, non-lethal solution that safely disrupts bird movement from the restricted areas using laser system.
- Won 1st for the Best Main Project of the Department Award

Other Projects

- Circuit Breaker AI • Head Controlled Classic Snake Game • Invisible Muqabla Effect • Room Proximity Alert Device

EXTRA-CURRICULAR ACTIVITIES

**College Union - LBSITW : Role- Association Secretary**

2023 - 2024

**Capture Crew - Photography club of LBSITW : Role - Programme Coordinator in Executive Committee**

2023 - 2025

**National Service Scheme - LBSITW Unit 161 : Role - Active Volunteer and Executive Committee Member**
